Soil

Let's study the earth by learning about the part of it that we are most familiar with: the **soil**. Soil is found on the upper-most layer of the earth's crust.

What is soil?

Soil is a mixture of four main ingredients: weathered rock, organic matter, air and water. The weathered rock can be in the form of sand, silt, clay, pebbles or larger rocks. Organic matter can be anything from old leaves, dead animals and plants, to microorganisms—tiny living things, like bacteria. The last two ingredients are air and water. Without air and water, the microorganisms found in soil cannot live, grow, or help dead matter to decay.

Why is soil so important?

Soil is important because it provides a place where organisms and bacteria can live. Plants rely on soil for nutrients, water and mineral salts. Plants in turn provide the oxygen we breathe, the food we eat, the clothes we wear, and the foundation and building materials we use to make our homes. We could not meet our basic needs without soil.

Comprehension: What is the main idea of these two passages?

Harriet Tubman

Harriet Tubman

Harriet Tubman was born a slave in Maryland around 1820. In 1849, she escaped to Pennsylvania, which was a free state, meaning slavery was not legal there. The following year, she returned home in secret to help family members escape slavery. By 1857, she had rescued her mother, her father and one of her brothers. After that, she helped as many as 70 slaves escape to free states, risking her own life to save others. In 1863, she led a raid that freed 750 South Carolina slaves.

Word scramble!

Unscramble the letters to form the word that completes the sentence.

1. Tubman helped escaped slaves find their way to free states along a route called the _____ Railroad. ROUNDUNDERG
2. Tubman worked as a nurse, a cook, and a laundress for the Northern forces during the _____ War. IVLCI
3. She worked as a spy for the _____ Army, the side fighting slavery, during the war. IONUN
